Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10 and 31-35, drawn to a retro-reflective etalon comprising an etalon filter, at least one polarization rotators, two linear polarizers and end mirror reflector or one cavity compensator, classified in class 356, subclass 519.
 - II. Claims 11-30, drawn to a frequency tunable laser cavity comprising a gain chip, at least an R-etalon, and/or a cavity phase compensator, classified in class 372, subclass 92.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the frequency tunable laser cavity does not require retro-reflective etalons as recited in the subcombination, it could use any etalon that provides retro-reflective feature and can be called R-etalon.
